What to Do with Used Sharps

**Sharps** refer to: needles, syringes, lancets, auto injectors, including epinephrine and insulin pens, infusion sets, and connection needles/sets.

Check [www.SafeNeedleDisposal.org](http://www.SafeNeedleDisposal.org) for local guidance on sharps disposal.

Put used sharps in a strong, plastic container.

When the container is 3/4 full, put the lid on, seal it with duct tape and label DO NOT RECYCLE.

Put the plastic container in the household trash—don’t recycle!

Containers of used sharps cannot be placed in the household trash in California, Massachusetts, and Seattle, Washington. Visit SafeNeedleDisposal.org for more information on safe sharps disposal in your area.
Used sharps must be placed in a strong, plastic container to be disposed of safely. There are many types of containers available. Some are made specifically to hold used sharps, and may be provided with new sharps, by a healthcare professional, or purchased at a pharmacy or online. If you do not have a container made specifically to hold used sharps, a strong, plastic container—like an empty laundry detergent or bleach bottle—may also be used.

How you dispose of used sharps safely may be different, depending on where you are.
